urchin softlight by molo

urchin softlight has an animate tactile character, inviting playful interaction. The elastic three-dimensional honeycomb geometry of urchin will morph through a multitude of forms as you rotate it through and around its own centre with your hands. It can even be turned inside out to create straight walled cylinders and conical forms. Adjusting the form of urchin also adjusts the intensity, direction and quality of light, a beautiful, tactile way of shaping the light of an intimate space. urchin is for indoor / dry use only and comes complete with an energy efficient LED light source in daylight white 4800K or warm white 3300K.

softlighting belongs to molo's innovative and award winning "soft" collection of expandable / compressible furniture and space partitions created from flexible honeycomb. The soft concept began with a desire for flexible, sculptural space making that could adapt any single space into many different types of environments.

* the urchin softlight is for indoor use only
